Fast Accurate RFID Reading in a Smaller Package

- Accommodates Carts
- Read 2000 Plus Items in 20 Seconds
- Isolates Reading to Inside the Portal
- Industrial Design

Tornado RFID Portal

The demand for a smaller, less expensive unit led to the introduction of Positek RFID's Tornado Portal. It was designed with the same fast and accurate automatic reading of textiles as found in the Cyclone Portal. Automated reading eliminates read rates that can be affected by employee technique. Reading is started by pressing a button and can only begin when the door is closed. A light illuminates while reading is taking place. When reading is complete the light turns off and the door can be opened. Positek RFID's connect software communicates with third party software packages as well as the Positek RFID Software suite. The portal can be used for both soil and clean textiles as well as assignment of RFID to new textiles.

Specifications

Weight	1200 pounds
--------	-------------

Overall Dimensions

Height	7'6"
Width with Door Closed	5'10"
Width with Door Open	8'3"
Depth	6'3"

Interior Dimensions

Width	3'0"
Depth	4'7"
Height	6'1"
